Richard McCleary, Richard A. Hay : Applied Time Series Analysis for the Social Sciences before purchasing it in order to gage whether or not it would be worth my time, and all praised Applied Time Series Analysis for the Social Sciences:

McCleary and Hay have made time series analysis techniques -- the Box-Jenkins or ARIMA methods -- accessible to the social scientist. Rejecting the dictum that time series analysis requires substantial mathematical sophistication, the authors take a clearly written, step-by-step approach. They describe the logic behind time series analysis, and its possible applications in impact assessment, causal modelling and forecasting, multivariate time series and parameter estimation.
