From Oxford University Press : Assessing Older Persons: Measures, Meaning, and Practical Applications before purchasing it in order to gage whether or not it would be worth my time, and all praised Assessing Older Persons: Measures, Meaning, and Practical Applications:

0 of 0 people found the following review helpful. Clear and comprehensive resourceBy Maria ClaverIt is so difficult to find a book about this topic that is still in print! This book is clear and great for both an undergraduate or graduate course.

This book describes the multidimensional assessment of older persons, offering unique insights into the state of this art. It combines comprehensive reviews of the most widely used instruments for measuring a variety of domains (such

as physiological status, cognition, affect, social function, quality of life, physical environment, and caregiver burden) with an exploration of the variety of uses to which these assessments have been put. It shows how assessment is used in various aspects of practice, including comprehensive geriatric assessment, care planning, case management, and mandated assessments. It also contains a chapter on how to collect data from persons who cannot communicate. The aim throughout is to combine information on specific measures with insight into how and when each measure should be used. The book is designed to serve as both a resource for those working actively in the field and an introduction for those who are not familiar with assessment in a given area.

"I couldn't wait to receive this book, and after reading several chapters I was even more excited about the content. It is essential for all health care providers who work with older people....Each chapter provides essential psychometric information about each instrument as well as important caveats about their uses....This book is a much-needed companion to the first, and is destined to also become a classic."Doody Publishing, Inc.
About the Author Robert L. Kane and Rosalie A. Kane are both in the Division of Health Services Research and Policy, School of Public Health.
