**Raymond Sin-Kwok Wong : Association Models (Quantitative Applications in the Social Sciences)** before purchasing it in order to gauge whether or not it would be worth my time, and all praised Association Models (Quantitative Applications in the Social Sciences):

Offers readers invaluable guidance on handling cross-classified data Broadening the scope of association models beyond the typical sociological and psychological fields, author Raymond S. Wong shows readers how to analyze and comprehend any social science data presented in cross-classified formats. Through a careful exposition of various association models, the text examines the underlying structure of odds-ratios, offering a unified framework for students and researchers in the process. Rich illustrative examples (from data generated by the General Social Survey and other sources) demonstrate why and how association models are a better option than conventional log-linear models or non-parametric specifications. This resource is appropriate for graduate students and researchers across the social and behavioral sciences who need to chose and apply the appropriate statistical tools to decipher and interpret cross-classified data. Students can enhance their experience by visiting the study site at [www.sagepub.com/wongstudy](http://www.sagepub.com/wongstudy).

About the Author Raymond Sin-Kwok Wong is Professor of Sociology at the University of California-Santa Barbara and Head and Professor in the Division of Social Science at the Hong Kong University of Science and Technology. His areas of research interests include inequality and social stratification, sociology of education, comparative research, quantitative methodology, and economic sociology. His most recent book, *Chinese Entrepreneurship in a Global Era*, is an edited volume published by Routledge in 2008.
