**From Brand: University of Calgary Press : Breaking Ice: Renewable Resource and Ocean Management in the Canadian North (Northern Lights)** before purchasing it in order to gage whether or not it would be worth my time, and all praised Breaking Ice: Renewable Resource and Ocean Management in the Canadian North (Northern Lights):

The pace of technological, social, and environmental change in Canada's Arctic has profound effects on resource management and policy decisions. The chapters in this volume result from a project undertaken by the Ocean Management Research Network that examines the nature of Arctic environmental evolution and sustainability. From the pressures of development, technological advances, globalization and climate change to social and cultural life, this book attempts to define the nature of competing demands and assess their impact on the environment. These essays provide a detailed examination of ocean and coastal management in the Canadian north, exploring a wide range of issues critical to environmental stewardship, and breaking the ice to connect academics, government managers, policy-makers, aboriginal groups and industry.

About the Author Fikret Berkes is professor and Canada Research Chair in Community-Based Resource Management, at the Natural Resources Institute, University of Manitoba.
