Larry E. Toothaker : Multiple Comparison Procedures (Quantitative Applications in the Social Sciences)
before purchasing it in order to gage whether or not it would be worth my time, and all praised Multiple Comparison Procedures (Quantitative Applications in the Social Sciences):

0 of 0 people found the following review helpful. Five StarsBy Dr Ragan Lorraine Lavoratim a doctoral student and

prof and statistician working on phd and it helped1 of 1 people found the following review helpful. An Excellent Guide for StatisticsBy Erin ChernakThis book is incredibly helpful in describing the abilities and limitations of various multiple comparison (or post hoc) statistics available when doing research. Larry Toothaker has an excellent understanding of these stats and he presents them in a way so that the reader does as well. A great resource!

In this volume, Larry Toothaker provides the procedures that will enable researchers to establish the significance of differences between two comparable groups. Issues addressed include: planned versus post-hoc comparisons; step-by-step versus simultaneous test procedures; types of error rate; unequal sample sizes and variances; and interaction tests versus cell mean tests. Examples are used to illustrate major concepts.
