From By M. Brown I believe that this book is one of the best books ever written. It's content has the highest potential in changing how we, as a society view "race." This book intelligently goes into detail in defining just what race is and what it is not. It gives a vast amount of research and data in clearly portraying how multiple "races" got started and it leads the reader in the direction of knowing how to not necessarily change the world's views on racism, but more importantly, how to change our own. It shows how society views itself and how much of the whole picture we've been too oblivious to even see. In truth, we see too much; we can't even get past the color of one another's skin. This book teaches that it's okay to see a phenotype as long as we learn not to associate a stereotype with the so called "races" of our society. Lastly, this book taught me that there's no such thing as "race" because in fact we are all of the HUMAN race, therefore one in the same, not so different as some tend to think. 6 of 9 people found the following review helpful. I wrote this one too!

By Dr. Joseph L. Graves Jr. Still a classic and a must read if one wishes to comprehend the history of racial theory in the Western World. Dr. Joseph L. Graves Jr. Also author of: *The Race Myth: Why We Pretend Race Exists in America*, Dutton Books, 2005.

In this groundbreaking book, Joseph Graves traces the development of biological thought about human genetic diversity. Greek philosophy, social Darwinism, New World colonialism, the eugenics movement, intelligence testing biases, and racial health fallacies are just a few of the topics he addresses. Graves argues that racism has persisted in our society because adequate scientific reasoning has not entered into the equation. He champions the scientific method and explains how we may properly ask scientific questions about the nature of population differentiation and how (if at all) we may correlate that diversity to observed human behavior. He also cautions us to think critically about scientific findings that have historically been misused in controversies over racial differences in intelligence heritability, criminal behavior, disease predisposition, and other traits. According to Graves, this country cannot truly address its racial problems until people understand the empirical evidence behind this truth that separate human races do not exist. With the biological basis for race removed, racism becomes an ideology, one that can and must be deleted.

From the Back Cover In this groundbreaking book, Joseph Graves traces the development of thought about human genetic diversity. He argues that racism has persisted in our society because adequate scientific reasoning has not entered into the equation. Graves champions the scientific method, and explains how we may properly ask questions about the nature of population differentiation and how (if at all) we may correlate that diversity to differences in human capacity and behavior. He also cautions us to think critically about scientific findings that have historically been misused in controversies over racial differences in intelligence heritability, criminal behavior, disease predisposition, and other traits. Greek philosophy, social Darwinism, New World colonialism, the eugenics movement, intelligence testing biases, and racial health fallacies are just a few of the topics he addresses. According to Graves, this country cannot truly address its racial problems until people understand that separate human races do not exist empirically. With the biological basis for race removed, racism becomes an ideology, one that can and must be expunged.

About the Author Joseph L. Graves Jr. is the author of the forthcoming book, *Devil's Bargain*. He has held professional appointments in evolutionary biology and African American Studies at University of California-Irvine and Arizona State University. Excerpt. Reprinted by permission. "The simple fact, as will be demonstrated in this book, is that science identifies no races in the human species, not because we wish there to be no races but because the peculiar evolutionary history of our species has not led to their formation. There is more genetic variability in one tribe of East African chimpanzees than in the entire human species! Only political orthodoxy in a racially stratified society has maintained the race concept for this long. If race does not exist at the biological level, then its use in social and political policy is profoundly flawed." -From *The Emperor's New Clothes: Biological Theories of Race at the Millennium*
