**From Springer : The Epidemiology of Aging** before purchasing it in order to gage whether or not it would be worth my time, and all praised The Epidemiology of Aging:

The average age of the worlds population is increasing at an unprecedented rate and this increase is changing the world. This Silver tsunami emphasizes the need to provide advanced training in epidemiology and increase the cadre of experts in the study of aging. This book is designed to summarize unique methodological issues relevant to the study of aging, biomarkers of aging and the biology/physiology of aging and in-depth discussions of the etiology and epidemiology of common geriatric syndromes and diseases. Contributing authors in the book represent many

disciplines, not only epidemiology and clinical geriatrics, but also demography, health services, research, cardiovascular disease, diabetes, psychiatry, neurology, social services, musculoskeletal diseases and cancer. The aim of the book is to provide a broad multidisciplinary background for any student/researcher interested in aging. The material in the book is organized and comprehensive. It represents the most up-to-date information on the scientific issues in aging research written by academics who specialize in research and training in the broad field of aging. The structure and organization of the book reflects our course series in the Epidemiology of Aging starting with the broad issues of demography and methodology, and then addressing specific health conditions and geriatric conditions common to older persons.

From the Back Cover The average age of the world's population is increasing at an unprecedented rate and this increase is changing the world. This Silver tsunami emphasizes the need to provide advanced training in epidemiology and increase the cadre of experts in the study of aging.
