From Policy Press : The New Science of Ageing (New Dynamics of Ageing) before purchasing it in order to gauge whether or not it would be worth my time, and all praised The New Science of Ageing (New Dynamics of Ageing):

This volume represents the first truly multidisciplinary examination of aging. Its astonishing breadth takes in everything from basic cell biology to social participation in later life to representations of aging in the arts and

literature. Drawing on the pioneering New Dynamics of Ageing Programme, the UK's largest research effort in the field of aging, it explores how aging is changing and the ways that it can be altered to improve both the lives of the aging population and their place in and contribution to contemporary society.

"This book contains some of the findings from the wide range of topics which were funded under the important NDA programme. They are a tribute to all the researchers involved."
