**Shawn W. Rosenberg : The Not So Common Sense: Differences in How People Judge Social and Political Life** before purchasing it in order to gage whether or not it would be worth my time, and all praised The Not So Common Sense: Differences in How People Judge Social and Political Life:

0 of 0 people found the following review helpful. Five StarsBy R. L.Satisfied6 of 7 people found the following review helpful. Common and Uncommon Sense on Not So Common SenseBy Mary Helen McMurrinThis is a truly remarkable book. It deals with the very difficult topic of how people judge the world around them. Unlike almost any other book on the topic, this book addresses both some of the philosophical issues involved and presents some very interesting empirical research. Amazingly it does all of this in a rather engaging, comprehensible way. I particularly liked the philosophical position presented in the Ch 2 and the annotated transcripts of indepth interviews presented in chapter 7.4 of 6 people found the following review helpful. uncommonly good senseBy jennifer stoneA most remarkable book about how people think. Unlike most political science research, it really explores the sense people make of political events. Offering sophisticated theory and interesting indepth interviews, the book provides keen insight into the different ways people think about and judge events. The author shows these differences show up whether people are thinking about their best friend or foreign policy. I especially like being able to see whole interviews and get a sense of the way people handle social and political issues.

In this fascinating interdisciplinary book, Shawn W. Rosenberg challenges two basic assumptions that orient much contemporary social scientific thinking. Offering theory and empirical research, he rejects the classic liberal view that people share a basic common sense or rationality. At the same time, he questions the view of contemporary social theory that meaning is simply an intersubjective or cultural product. Through in-depth interviews, Rosenberg explores the underlying logic of cognition. Rather than discovering a common sense or rationality, he finds that people reason in fundamentally different ways, and these differences affect the kind of understandings they craft and the evaluations they make. As a result, people actively reconstruct culturally prevalent meanings and norms in their own subjective terms. Rosenberg provides a comprehensive description of three types of socio-political reasoning and the full text of three exemplary interviews. Rosenbergs findings help explain such puzzling social phenomena as why people do not learn even when it is to their advantage to do so, or why they fail to adapt to changed social conditions even when they have clear information and motivation. The author argues that this kind of failure is commonplace and discusses examples ranging from the crisis of modernity to the classroom performance of university students. Building on the ideas of Jean Piaget, George Herbert Mead, and Jurgen Habermas, Rosenberg offers a new orienting vision, structural pragmatics, to account for these social phenomena and his own research in cognition. In the concluding chapter, he discusses the implications of his work for the study of social cognition, political behavior, and democratic theory.

About the AuthorShawn W. Rosenberg is director of the political psychology graduate programme and professor of political science and psychology at the University of California, Irvine.
